CLAIMS:

5

10

- 1) A gas laser device having a repetition rate of 4 kHz or more comprising:
 - a laser chamber having laser gas filled therein;
- a pair of main discharge electrodes oppositely arranged in the laser chamber and spaced apart by a predetermined distance;
- a cross-flow fan for circulating the laser gas within the laser chamber at least between the main discharge electrodes; and
 - a bearing structure for rotatably supporting the cross-flow fan, wherein
- a diameter of the cross-flow fan is $150~\mathrm{mm}$ or less and a peripheral speed thereof is $25.0~\mathrm{m/s}$ or more.
- The gas laser device according to claim 1, wherein the peripheral speed of said cross-flow fan is 27.0 m/s or more.
- 3) The gas laser device according to claim 1, wherein said bearing structure is a roller bearing adapted for being rotated at 4500 rpm or less.
- 4) The gas laser device according to claim 1, wherein said bearing structure is a magnetic bearing adapted for being rotated at 5000 rpm or less.
